

the *prime* guide to DISTILLATE AND TERPENE SYRINGES

100% cannabis-derived terpenes that are extracted in house

Activated THC that is ready for patient use

Our distillate and terpene syringes offer users access to the **powerfully medicinal strains** patients have come to expect from our *prime* whole flower. Using our medical grade glass applicators, patients can safely and conveniently achieve the **precise dosing** of our **thick cannabis oil concentrates** for their specific medical needs.

Medical-grade glass applicator facilitates safe precision dosing

Strain-specific formulations accommodate a wide array of patient needs

Application Methods

Our distillation process carefully extracts the powerful compounds in *prime* flower, while preserving unmatched terpene and flavor profiles. The result is a **potent** and **already activated** THC distillate. No decarboxylation necessary, patients can readily consume *prime* distillate through a **variety of application methods**:

1 Oral

Ingestion by swallowing, which may produce a medicinal effect after being digested

2 Buccal

Application between the gums and cheeks, which may allow for swifter absorption into the bloodstream

3 Sublingual

Application beneath the tongue, which may allow for swifter absorption into the bloodstream

4 Vaporization

Application of heat to the product, which may provide more immediate relief upon inhalation
