

# the *prime* guide to **LIVE RESIN CARTS**

Prime liquid live resin is crafted from flower that has been frozen directly after harvest, using our world class hydrocarbon extraction process. This **live-plant extraction** method preserves the **cannabinoid potency** and **unmatched terpenes** of our *prime* whole flower.

With no synthetic or outside ingredients, our **100% cannabis-derived** live resin cartridges have the potential to provide patients with **discreet and immediate** access to relief.

## quality hardware

Prime cartridges use quality hardware, made with **food-grade glass and stainless steel**. Our cartridges feature universal 510 threading and an **industry-first** porcelain mouthpiece. Heated by innovative **CCell technology**, our cartridges ensure optimal delivery of **thick oils and distillates**.

## terpene profiles

Terpenes produce the **scents and flavors** of cannabis flower. The **potent terpenes** in *prime* live resin cartridges may work with THC and other cannabinoids to provide a potential range of therapeutic effects. The terpene and cannabinoid profiles for *prime* live resin vape cartridges are listed on the **compliance labels** included on all our product packaging.
