

Introducing *prime* Solventless: GO FOR THE GOLD

What's in the box? It's your first look at our all-new *prime* solventless – a premium innovation for Pennsylvania patients that showcases the unmatched quality our extractors achieve when they **go for the gold**. We've heard the demands, and it's *prime* time we heed the call for high-quality *prime* rosin, now arriving on dispensary shelves across the Commonwealth!

How does this new product compare to our other extracts? Traditional *prime* extracts are made by saturating plant material with hydrocarbon solvents like butane. Solventless is made exclusively with heat, pressure, and filtration – harnessing the plant material's flavor and potency with **no solvents, no synthetics, and no cut corners**.

Read below for a *prime* insider's look at our first solventless batches that are headed to a Commonwealth dispensary near you:

- Each gram of *prime* solventless is **crafted by hand** – carefully washed, pressed, and packaged by our expert extractors for optimal trichome isolation and quality control
- Our first Solventless batches heading to the Commonwealth market feature our **top-performing Thai genetics** – including the *prime*-exclusive cultivars Super Silver Thai #15, African Thai #15, Purple Thai #25, and Chem de la Thai #84.
- Cold storage and **temperature control** is key for maintaining product integrity overtime. Before opening and vaporizing solventless products that have been refrigerated, allow the product to rest at room temperature for 20 minutes to prevent moisture from accumulating on the product.
